zephyr

SHORT PROJECT DEFINITION

Zephyr is a new stack for radically profitable synthetic trading with 30% more success odds to win in a manipulation-resistant environment.

PROBLEMS - SOLUTIONS

Profit Uncertainty

Zephyr offered a mathematically justified model of guaranteed rewards distribution.

Complex Trading Mechanisms

The platform has an agile and effortless forecasting flow and a lay trading glossary.

Whales Manipulation

Zephyr eliminates the influence of whales and early holders with a differentiated forecasting model.

Centralized Care

The platform never gets in the middle of the forecasting process while settlement algorithms are held in open source.

Price Manipulations

Zephyr doesn't utilize any odds or price ranges and has zero influence on creating or settling forecasts.

KEY FEATURES

Guessing Space

One no longer needs to risk buying coins or paying gas fees. With Zephyr, users have 30% more chances to profit than in classic trading.

Wisdom of Crowds Data

It allows users to stay tuned for real market data to build or recalibrate a trading strategy.

Investing in MVPs

The platform enables to invest in trading MVPs with proven and open-source trading stats.

Polystage Staking Program

Stake ZEPH utility token to participate in the platform's governance, provide liquidity, and earn the highest yield.

AI-powered Price Analytics.

It's a great tool for beginners who hesitate to make the right move while creating a forecast.
